

## Hilton Vacuums to the Rescue

At Sydney Materials Handling, Hilton Industrial Vacuums will display hardwearing, high performance vacuum cleaners of the kind used in the Christchurch earthquake cleanup where fine and difficult materials are encountered.

The earthquake resulted in hundreds of residential, commercial and industrial premises being filled with dust and rubble.

Hilton industrial vacuum cleaners were called in to assist, with equipment required to work continuously for eight hours plus. With dual filtration incorporating the latest cyclonic technologies, Hilton was able to respond effectively.

The unique design provides maximum separation and minimal maintenance. Filtration built from the highest-grade HEPA (high efficiency particulate arrestor) filter fabric allows maximum airflow while stopping the finest dust particles from getting through.

For a filter to have a HEPA rating it must retain particles to 0.3 microns in size at an efficiency rating of 99.97 per cent.

These filters were developed by the atomic energy commission during World War II to effectively remove radioactive dust from plant exhausts without redistribution.
